INTRODUCTION TO HEAT TRANSFER

D. Butterworth B.Sc(Eng.) C.Eng. M.I.Chem.E.

Dave Butterworth

Contents

Notation	1		
Introduction	3		
Basic concepts in heat transfer	3		
Conduction, convection and radiation	3		
Single-phase heat-transfer coefficients	4		
Boiling coefficients	10		
Condensing coefficients	14		
Fouling and scale formation	15		
Overall coefficients	15		
Types of heat exchanger	16		
Double-pipe exchanger	16		
Shell-and-tube exchanger	17		
Plate exchanger	19		
Air-cooled, finned-tube exchangers and radiators	20		
Agitated vessels	22		
Direct-contact heat exchangers	24		
Heat pipes	24		
A pipe in free air	24		
The elements of design	27		
Temperature-enthalpy curves	27		
The counter-flow exchanger	28		
Temperature-correction factors for non-counter-current flow	31		
Pressure-drop considerations	31		
Example of a design calculation	34		
Use of computers in design	34		
Physical properties	34		
Conclusion and further reading	34		
Appendix. Worked examples	35		
Example 1. To find the heat-transfer coefficient for single-phase flow in a tube	35		
Example 2. To find the heat-transfer coefficient for single-phase flow in an annular passage	35		
Example 3. To find the heat-transfer coefficient for natural convection on the outside of a horizontal tube	36		
Example 4. To find the heat-transfer coefficient for cross flow to an ideal bundle	36		
Example 5. To find the heat-transfer coefficient for cross flow to finned tubes	36		
Example 6. To find the heat-transfer coefficient and critical heat flux in pool boiling	37		
Example 7. To find the heat-transfer coefficient for forced-convective boiling	37		
Example 8. To find the heat-transfer coefficient for condensation on horizontal tubes	38		
Example 9. To find the heat-transfer coefficient for condensation on the outside of a vertical tube	38		
Example 10. To find the heat-transfer coefficient for condensation inside a horizontal tube	38		
Example 11. To find the overall coefficient for a plain tube	39		
Example 12. To find the overall coefficient for a finned tube	39		
Example 13. To find the MTD-value for a counter-flow, single-phase exchanger	40		
Example 14. To find the MTD-value and overall heat-transfer coefficient for a counter-flow condenser which has desuperheating and condensing zones	40		
Example 15. To correct the MTD-value in Example 13 for non-counter-current flow	41		
Example 16. The design of a double-pipe exchanger	41		
Acknowledgements	42		
British standards	42		
Bibliography	42
